Technical informations

The basically used stainless steel austenitic steels are:

1.4301 (X 5 Cr Ni 18 10) 304 L

- the most engaged steel
- basically using in the food industry
- weld-able without preheating

1.4404 (X2 Cr Ni Mo 17 32 2) 316 L

- higher chemical consistency as 1.4301
- very good corrosion resistance
(also compared to chloride ionic)
- very good to polish
- it's at the Cr-Ni-Mo- steels the most represent substance
- very good to weld without preheating

1.4435 (X Cr Ni Mo 18014 3) 316 L

- minimal ferrite concentration and so a higher corrosion resistance as 1.4404
- using very often in the chemistry and pharmacy
- weld-able without preheating

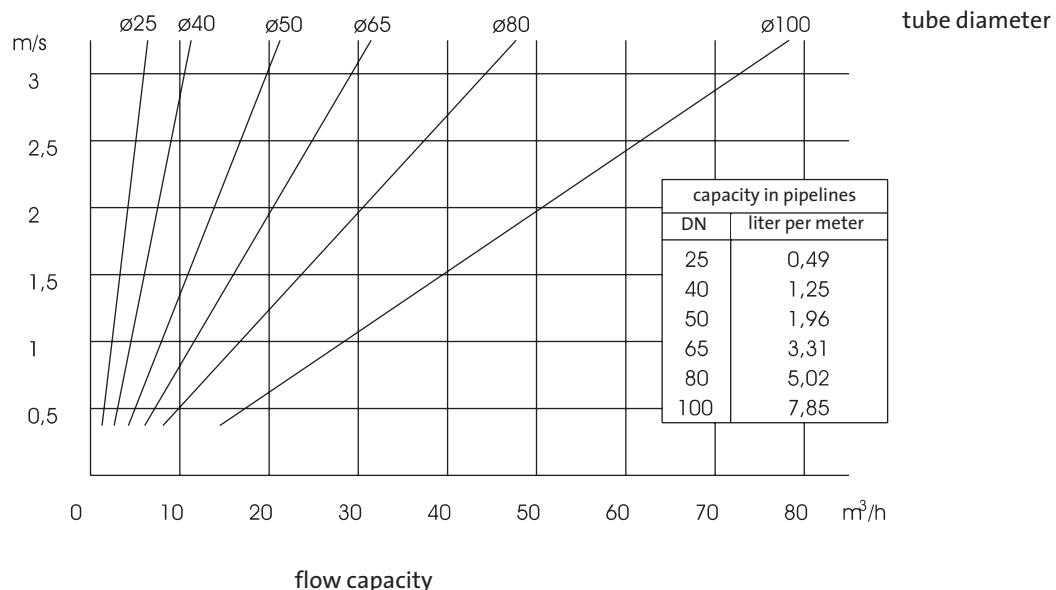

1.4571 (X 6 Cr Ni Ti 17 12 2) 316 Ti

- will be displaced more and more of the material 1.4404
- very good corrosion properties and good weldable
- bad to polish and to machine

name	silicone (VMQ)	EPDM (Ethylen-Propylen-Dien-caoutchouc)	Viton (FPM)	Perbunan (NBR)	PTFE (Polytetrafluoräthylen)
working temperature	in water constant till 100 °C	long-term of - 40 °C till 140 °C	long-term of - 20 °C till 200 °C	long-term of - 25 °C to 110 °C	till 200 °C physiological harmless, adoption of -200 °C till +260 °C
type. application area	autoclave rapid till 120 °C - 130 °C	autoclave till 130 °C	autoclave rapid till 130 °C - 140 °C	autoclave rapid till 130 °C	good swelling resistance at almost all parts, surface clean and dening, because of this no lieable of arrears
	high thermal capacity, good cold resistance, adequacy for the intended use for food, electrical predicates	good swelling resistance at: • dilute organic and inorganic acids, bases, polar organic media, oxidising media, bases and ketone.	good swelling resistance at: • mineral oil, • vegetable and animal oils	good swelling resistance at: • aliphatic carbon hydrides (like propane, butane, petrol, mineral oils)	good swelling resistance at almost all parts, surface clean and dening, because of this no lieable of arrears
	good resistance compared to alcohol	• in hot water and steam till 130° C	• fats (also specific additives)	• fat of mineral oil basic	the chemical resistance is better as at all other elastomer barely flammable
limitation of use	high bulking at: • low-molecular ester and ether	do not use at • natural and animal oils	strong bulking at: • polar dissolvers like acetone, methyl ketone, ethyl acetate, diethyl aether and dioxin	not resistant at: • polar dissolvers	not resistant at: • liquid alkali metals and some fluoride in composition with high compression and temperature
	• aliphatic and aromatic carbon hydride,	• aliphatic, aromatic and organ. Säuren chlorinated carbon hydride	• low-molecular organic acids (formic and acetic acids)	• chlorinated carbon hydride	no rubbery elastic material
	• concentrated acids and acalics	• mineral oils	• ammonia gas, amine and alcalics • overheated steam	• ketone • aromatics (benzol) • Ester

Technical Informations

Polycarbonate (shatterproof for viewport)

Color:

transparent (Light Transmission>86%)

Material-describtion:

Thermoplastic polymer

Operating temperature:

short term up to about 120 ° C for cleaning

Typically use:

- protection for splinter Sightglasses
- very Breakproof and Impact
- excellent light transmission
- resistant to mineral acids, many org. Acids
- oxidizing and reducing agents, neutral and acidic saline solutions,
- many fats, waxes and oils

Operating limits:

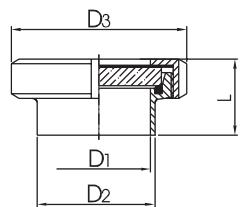

- not very scratch resistant
- not resistant to aqueous or alcoholic alkali lye,,
- Ammonia and its solutions and amines.
- severe swelling in benzene, chlorobenzene, tetratin, acetone, ethyl acetate,
- Acetonitrile and carbon tetrachloride
- not designed for product contact parts

 Recommended
cleaning:

- Fa. WIGOL: 30 20 04, 30 20 00, 1085, 60 80 25
- Fa.WEBCO: „alcip“
